The following is an examiner's statement of reasons for allowance: US Pat. 5,183,847 to El-Hefnawi et al is considered the closest prior art, but it failed to utilize the instant fatty acid as a reactant. US Pat. 6,620,770 to Kirsner et al teach the use of a fatty acid in making the reaction product of a carboxylic acid-terminated polyamide and Diels-Alder adduction at col. 2, but it failed to utilize the instant non-carboxylic acid containing vinylic monomer. The examiner does not see any motivation to combine those two prior art. US Pat. 6,437,037 to Hutter teach the instant rosin-fatty acid vinylic polyamide polymer. But it is an intermediate being further reacted with a vinylic monomer in an emulsion polymerization in order to yield a rosin-fatty acid vinylic polyamide graft polymer latex which differs from the instant polymer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
